

Appendix 1: Assignment submission cover sheet

ASSIGNMENT SUBMISSION COVER SHEET

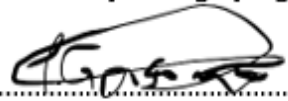

Student Id:	Cse25-414
Student names:	Tefo Abigail Gasenna
Student email:	Cse25-414@thuto.bac.ac.bw
Cohort:	2026 MAY
Assignment title:	SCIS WMD_2026 A01
Date of submission:	20/05/2026
Programme of Study:	CSE
Year of Study:	YEAR 1 SEMESTER 2

Introduction

BotsNav (Botswana Navigation) is an all-inclusive digital directory and discovery platform formed to increase the visibility of the Botswana Local Brands (BLB) organization. In a gradually growing marketplace, indigenous enterprises often have difficulty reaching a broader audience due to inadequate resources or the skillset required to highlight their products and services. BotsNav deals with this gap by taking important information regarding local services and activities such as hotels, sporting events, restaurants, and nightlife into a single, user-friendly web interface.

1. Website Specifications

- a) **Objectives:** The primary objective of this project is to create an accessible ecosystem that helps Botswana's local economy.

Goals

- **Centralization:** Combining a diverse local service sector (hospitality, shopping, food, and entertainment) into one place.
- **Local brands empowerment:** Providing an updated digital presence for Botswana local brands, enabling them to compete with global markets by boosting their online reach.
- **Information accessibility:** Ensuring users can find updated information regarding local venues, gig guides, and contact information in one location.
- **Technical integration:** Using modern web technologies, including HTML5, CSS3, and the Bootstrap framework. This makes sure there is a high-performance, real-time response and an easy user experience across all devices.

b) Target Audience

Botsnav is designed for a dual audience profile:

Local users: Residents looking for local leisure spots, dining, and sporting events within their vicinity.

- **Demographics:**
 - **Age ranges:** The 18-44 age group showed the highest ratio of internet use in Botswana at 19.5% (Statistics Botswana, 2024).
 - **Location:** Urban areas such as Gaborone, Francistown, and Maun.

- **Gender:** Mixed. Male-led households make up 52.2% of internet-connected households, while female-led households make up 47.8% (Africa-Press, 2025).
- **Technical Aptitude:**
 - Most local households get internet via broadband networks through handsets, which accounts for 86.1% of household internet connections. Because of this, BotsNav must be mobile responsive.
 - Aware of platforms such as Facebook, Google Search, and WhatsApp.
 - Comfortable with browsing, social media, and basic web navigation.
- **What they need from BotsNav:**
 - Fast access to local restaurants, hotels, and activities/events.
 - A simple search and filter to look up what they need fast.
 - Updated details such as opening hours and contact details.

International tourists: Global visitors looking for authentic Botswana experiences and reliable information on the best local hotels and attractions.

- **Demographics:**
 - **Age range:** 25-55 years old.
 - **Origin:** Primarily Southern Africa countries such as Zimbabwe, South Africa, and Zambia, followed by those from other continents such as Europe and North America.
 - **Visit purpose:** Safari tourism, business travel, cultural exploration.
- **Technical Aptitude:**
 - Highly familiar with using travel platforms such as TripAdvisor, Booking.com, and Google Maps.
 - Expect professional, well-structured websites with clear information.
 - Will access BotsNav primarily on mobile devices while travelling.

c) Type of Website

Directory website: It is a Tourism and Lifestyle directory website.

2. Information Design and Taxonomy (Site Map)

This site map displays the hierarchical structure of BotsNav and how the core pages are correlated.

Home page

This is the central hub consisting of:

- Tagline and branding
- Links to all sub-pages
- Social media links

Category Pages (Hotels & Lodging, Shopping, Dining & Nightlife, Sports & Games) Each category page uses a consistent layout that includes:

- Image of the venue
- Name and Category
- Location
- Operating Hours
- Contact Information
- Brief Description
- An interactive detail overlay (with a close option)

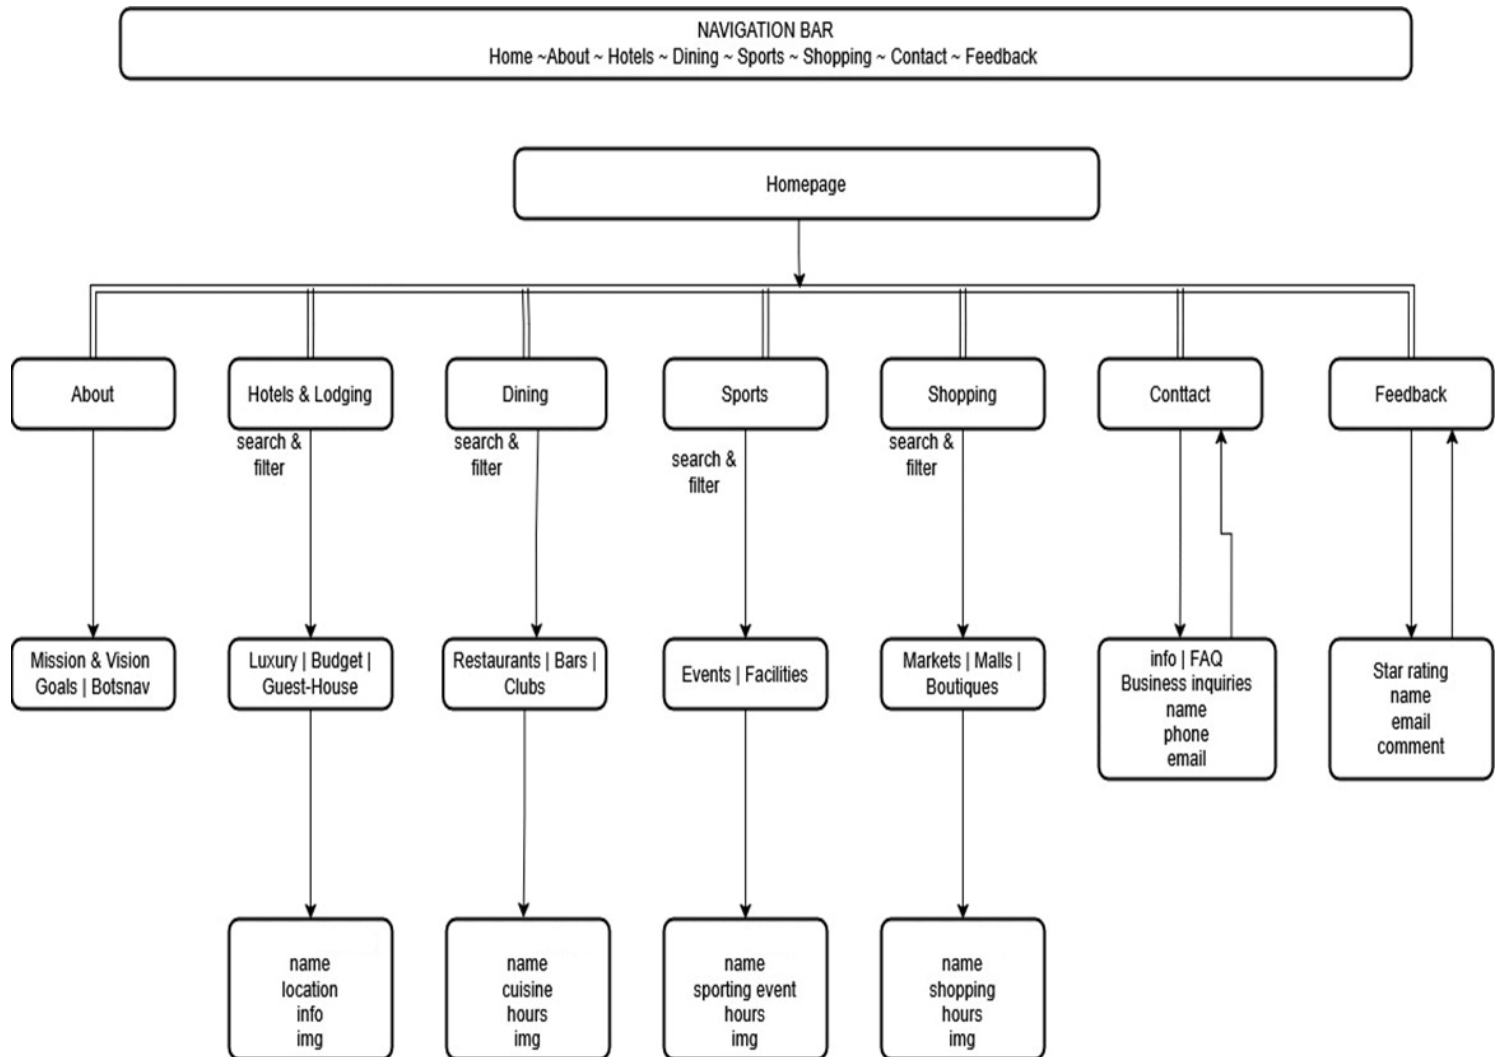

About Page

- BotsNav Mission, Vision, and Goals.

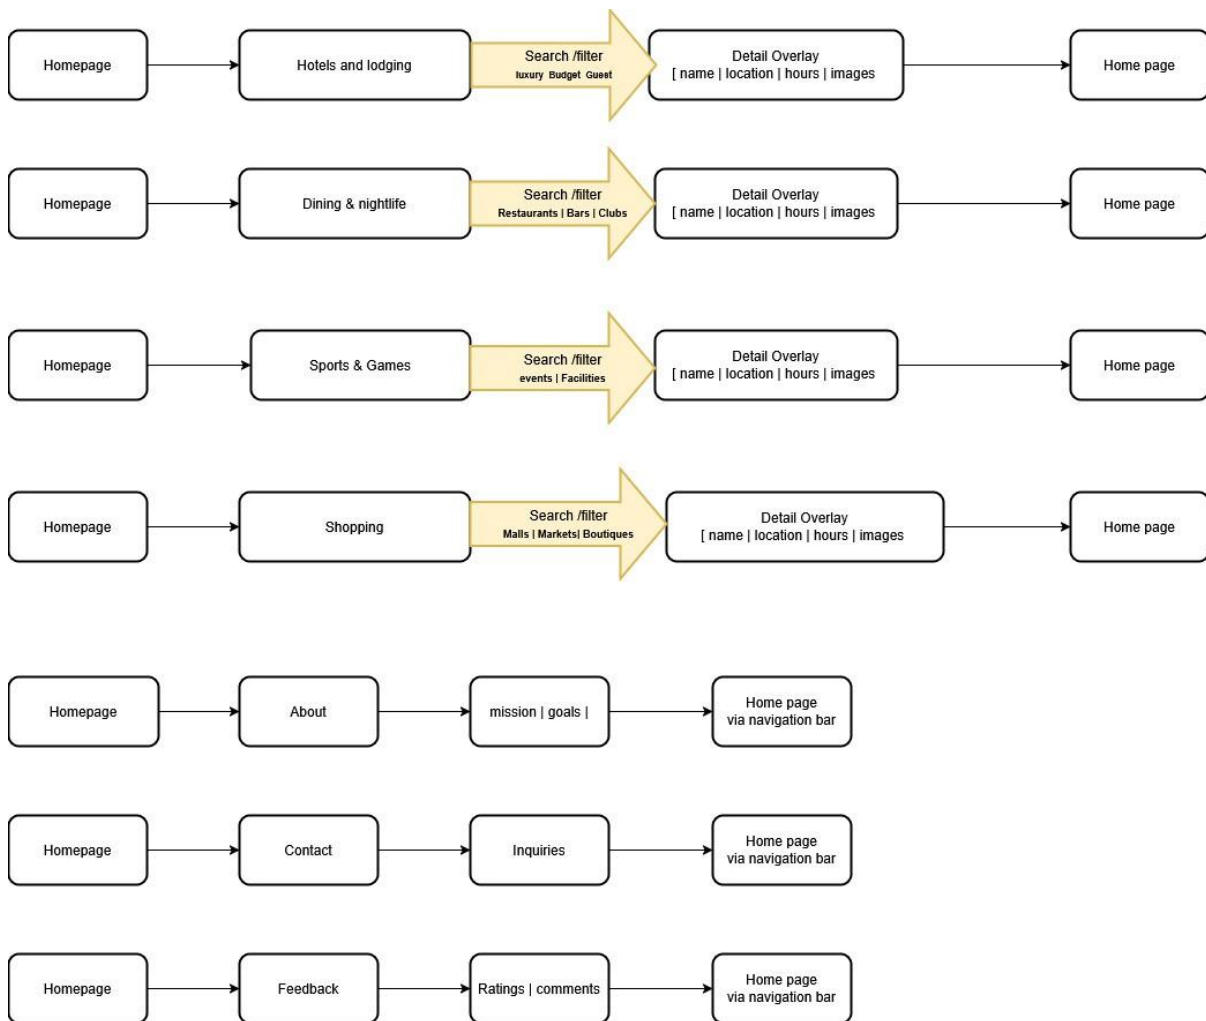

Contact & Feedback Pages

- Business inquiries and Info/FAQ.
- A feedback form requiring a star rating, name, email, and comment.

Sitemap

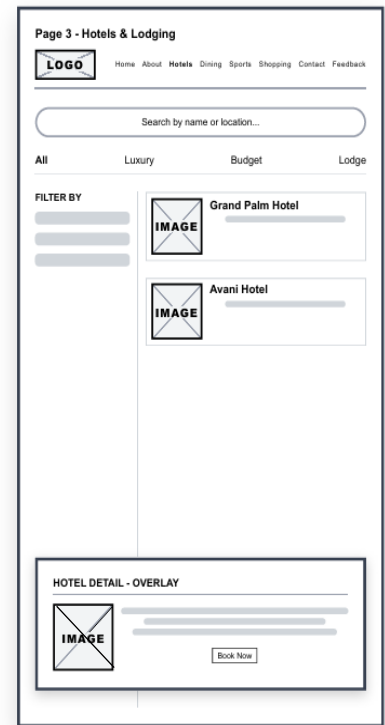

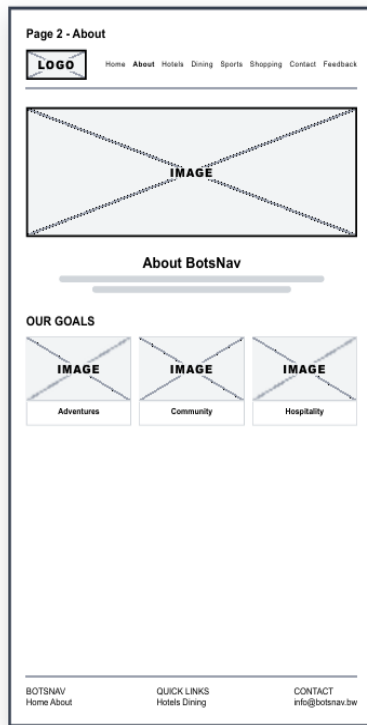

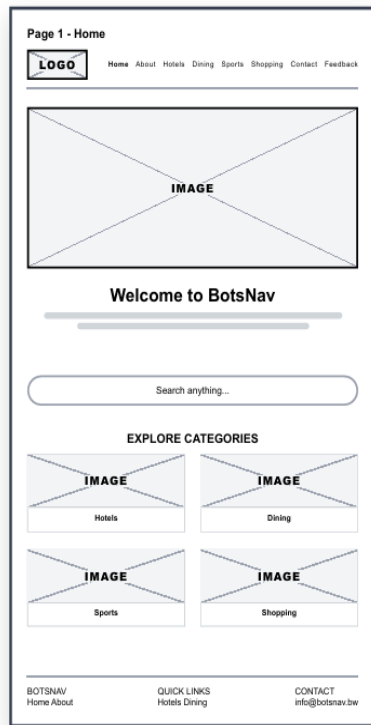

Navigation path

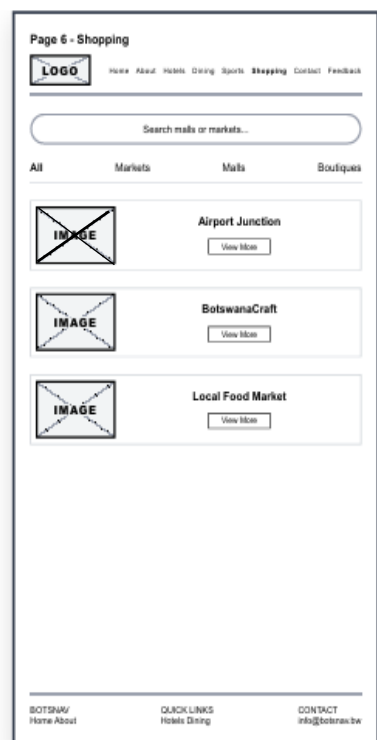

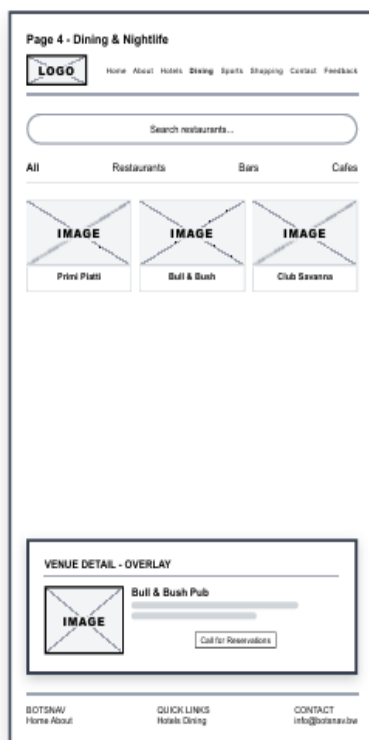

3-click rule: Homepage → Category page → Detail Overlay

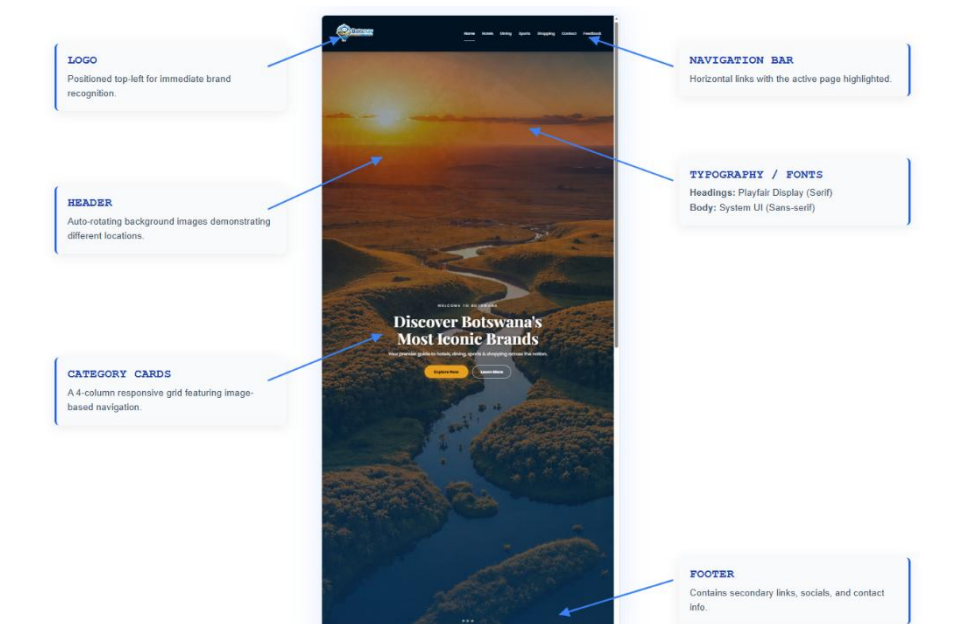

3. Page Template Design:

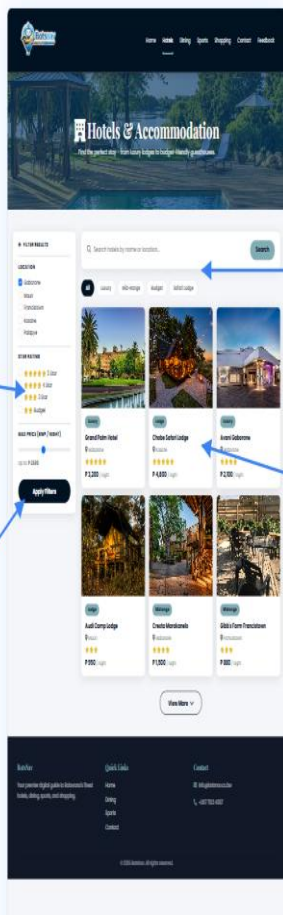

Low fidelity wireframes

High fidelity wireframes

FILTERING SIDEBAR

Sticky vertical taxonomy for narrowing down locations.

STAR RATING INPUT

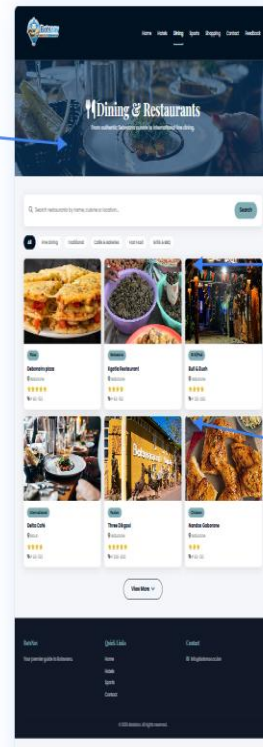

Interactive star icons used as form inputs for filtering.

SEARCH BAR

Full-width search input for

LISTING GRID

Uniform cards displaying in price/rating data.

CONTEXTUAL HEADER

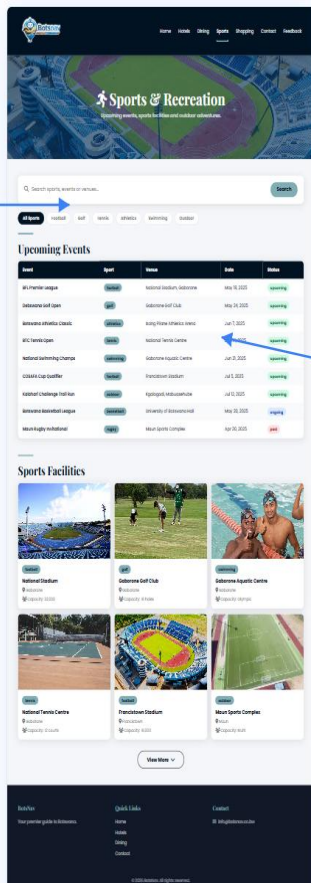

Specific background imagery relevant to dining.

CUISINE TAGS

Horizontal scrolling pills for quick cuisine filtering.

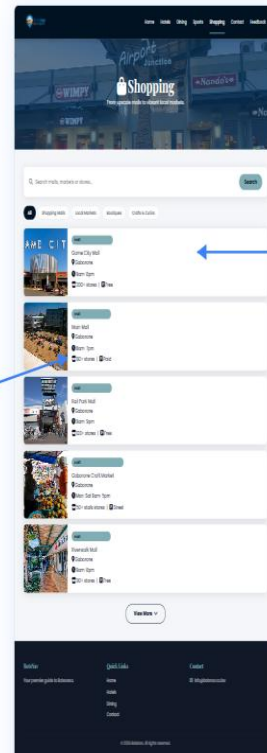

CONTENT GRID

Visual consistency maintained across different page types.

EVENT QUERY

Specialized search tuned for finding specific sports events.

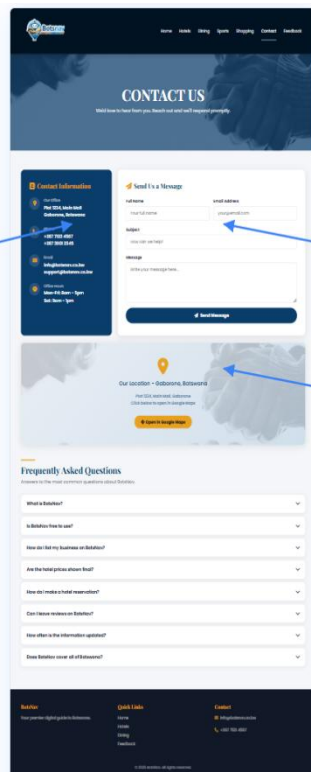

RETAIL FILTERS

Quick tags (e.g. Malls, Boutiques) for fast filtering.

MALL LISTINGS

Clean grid displaying shopping centers and markets.

CONTACT DETAILS

Clear presentation of physical address, phone, and email.

SUBMISSION FORM

Standardized form inputs for user inquiries.

EMBEDDED MAP

Visual map integration for location discovery.

4. Technical Brief

Front end and development technologies:

HTML 5

To create the structure of the website pages I used Html 5.

CSS 3

For styling of the website which includes colours, layouts, animations, spacing, and responsiveness I used CSS.

Bootstrap 5

To create responsive layouts, navigation bars and utility classes improving consistency across the website, I used Bootstrap.

JavaScript

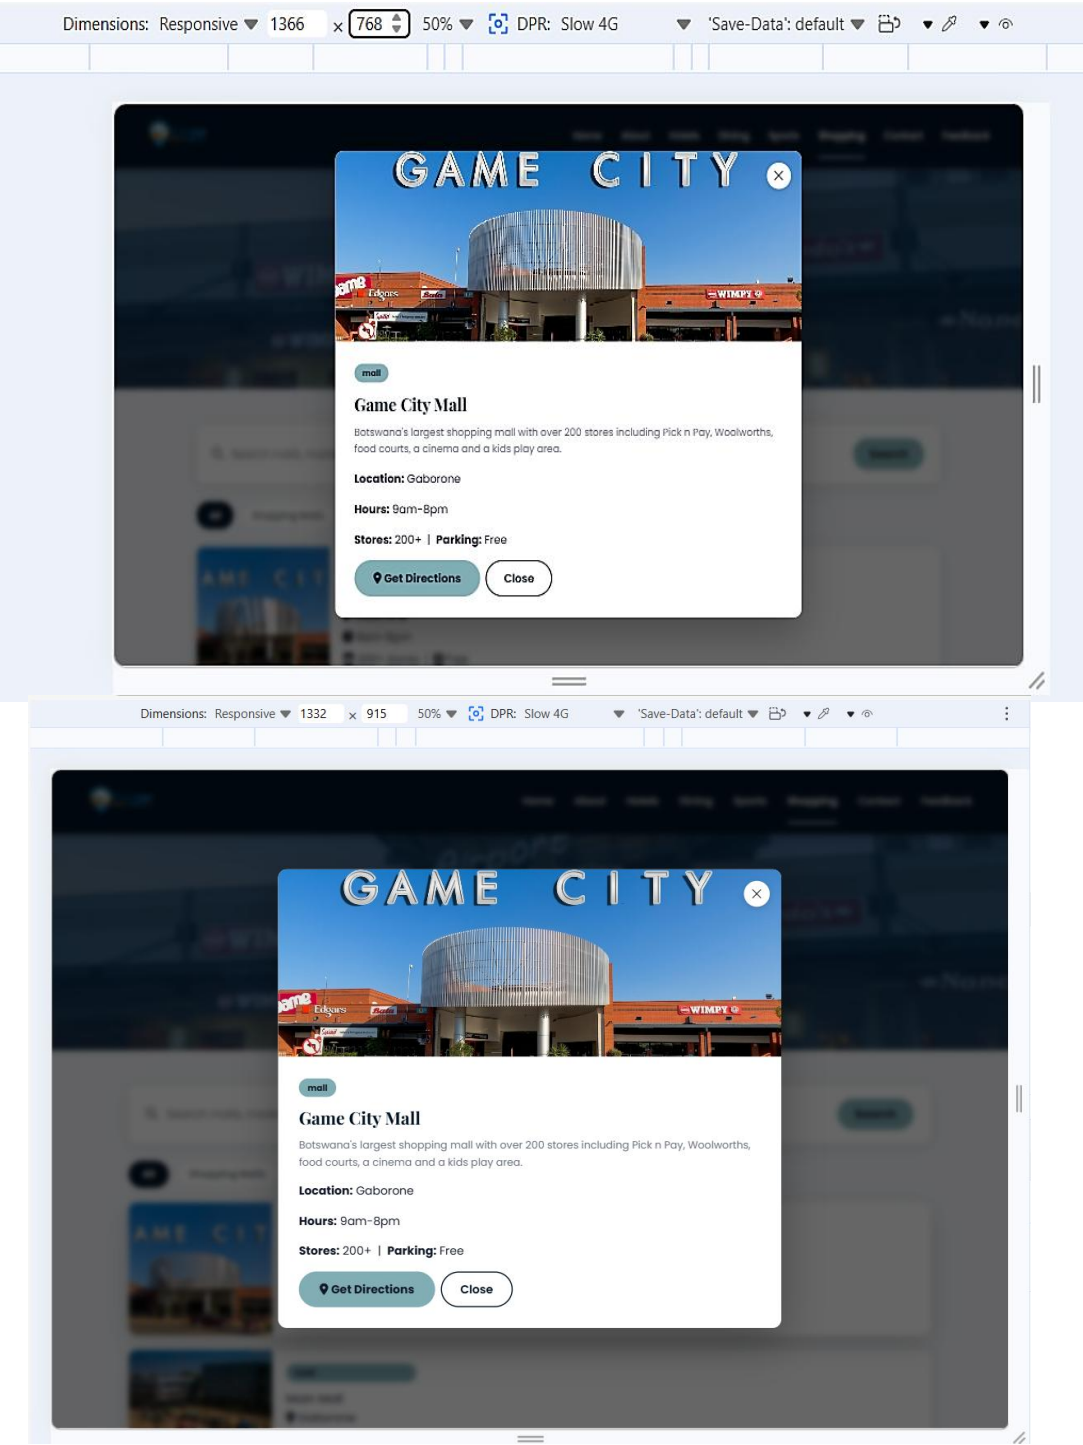

To integrate interactivity I used JavaScript, which added features such as search filtering, displays overlays and manages user interactions.

Typography and Icons

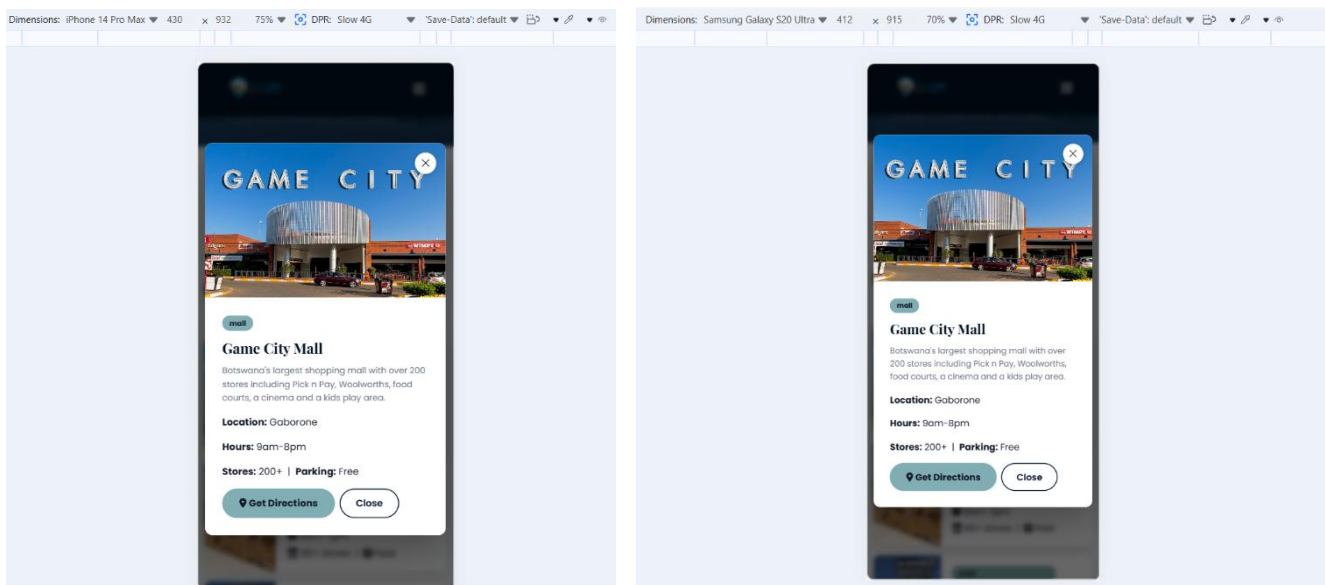

Throughout the website I used Font Awesome icons and Google Fonts for improving the typography and visual appearance.

5. Quality assurance

Test case 1: Desktop Browser Compatibility

Test case 2: Mobile Device Responsiveness

Quality Assurance testing was rigorously done using Google Chrome DevTools. Successful testing of website on an a, browser compatibility and mobile device responsiveness was tested rigorously using Google Chrome Developer Tools (DevTools). A demonstration of the JavaScript modal overlays and Bootstrap grid functioning perfectly on iOS (iPhone 14 ProMax (430x932 viewport)) and Android mobile devices (Samsung S20 Ultra (412x915 viewport)), including browsers such as chrome and Microsoft edge desktop web browsers.

6. Publishing & Promotion

Botsnav website is hosted globally using GitHub pages, which is a faster, cleaner, and more reliable cloud hosting service that combines with version control instead of using a local command-line interface. It uses the GitHub web interface to upload and oversee project files.

The following method was used to successfully publish the website:

1. Repository: I already had a repository ready.
2. Asset Uploading: My project files were uploaded in well structured batches. I started by uploading the wireframe documents, then HTML files, followed by a folder consisting of my pictures called dinepe then CSS stylesheets and READ ME doc, for an orderly directory structure.
3. Version committing: Once the files were placed in the browser, I executed the commit changes, which saved my files into the repository's main branch.

4. **Enabling GitHub:** By navigating to the repository settings (pages section), made sure the source was set to the main branch and saved the settings. Triggering GitHub actions workflow to build and publish the live website.
- GitHub Repository URL: [<https://github.com/TefoAbigailGasenna/CSE25-414>]
- Live Website URL (GitHub Pages): [<https://tefoabigailgasenna.github.io/CSE25-414/>]

7. Future Developments and Recommendations

While the current version of BotsNav successfully achieves its goal as a responsive, front-end digital directory, there are several ways the platform can be improved in the future to provide a better experience for both tourists and local businesses:

1. **Database Integration:** Currently, all the hotel and restaurant information is hardcoded into the website. In the future, I would integrate a backend database (such as MySQL) and a server-side language (like PHP). This would allow local business owners to log into an administrative dashboard and update their own business hours and photos without needing a web developer to change the HTML code.
2. **User Accounts and Live Reviews:** I recommend adding a user authentication system. This would allow tourists and locals to create personal accounts, save their favorite locations to a "Wishlist," and leave live, verified star ratings and reviews on the category pages.
3. **Interactive Maps API:** To better assist international tourists, I would integrate the Google Maps API directly into the detail overlays. Instead of just reading the location text, users could see exactly where the venue is on an interactive map and get real-time directions from their current location.
